TO WHOM IT MAY CONCERN

I know Mr. Barış Irhan from the undergraduate (MATHEMATICS FOR ENGINEERS, COMPUTING METHODS IN ENGINEERING) and graduate courses (FINITE ELEMENT METHOD,NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS) that he has taken as undergraduate and graduate student at the Civil Engineering Department of Middle East Technical University. Mr. Irhan was very successful (among the top five percent) in all these courses.
I do remember that as a term project in the FINITE ELEMENT METHOD course he has developed a Mathcad program to solve plane elasticity problems.
He is now an excellent programmer capable of writing codes using "FORTRAN", "C++" languages.

After receiving his BS degree in civil engineering I had encouraged him to pursue his studies abroad. He has completed the following graduate programs in Germany;
M.Sc., Stuttgart University, COMMAS Master Program, 2001-2003, Stuttgart, Germany
Dr.-Ing., Stuttgart University, Institute of Construction Materials, 2011-2014, Stuttgart, Germany

He has used his extra ordinary skills to develop an efficient computer program to solve the "Contact Impact and Fragmentation" problem during his PhD studies.

He became an expert in computational mechanics, and used it during his professional work as an engineer.

Mr. Irhan has nice personality. He is highly motivated.

I am sure that he will be very successful in his professional life as an engineer with considerable experience and programing skills.

Prof Dr. Turgut Tokdemir
